

GIGACHAD PROCEDURES

I (Nikita39Gamer) have spent much time making these approaches. Please use them all!

RWY	PROC	IAF	RNAV?	How to handle arrival?	Go-Around IAF
11	ILS/LOC X 11	VECTORS	NON RNAV	Vectors to localizer	VECTORS
	ILS/LOC Y 11	PER, COC	NON RNAV	Vectors for IAF	COC
	ILS/LOC Z 11	TINDR	RNAV	Clear via STAR	COC
15	ILS/LOC Y 15	PER, ORG	NON RNAV	Vectors for IAF	ORG
	ILS/LOC Z 15	TINDR	RNAV	Clear via STAR	TINDR
29	LOC DME 29	PER, ORG	NON RNAV	Vectors for IAF	D4.6 ORG
	Circling 29			APCH 15, then circling	PER
	RNAV 29	NOONU	RNAV	Clear via STAR	NOONU
33	RNAV 33	PH003	RNAV	Clear via STAR	PH003
	Circling 33			APCH 11, then circling	COC

Go-Around IAF means the IAF where approach begins for ACFT who went “missed”. This means that if ACFT goes around, it can do the same APCH starting at Go-Around IAF of approach.

If ACFT doing circling goes “missed”, then it should follow the published missed approach procedure, then join instrumental approach and then repeat circling as published.

NON RNAV procedures can be used by all ACFTs with VOR and DME. RNAV procedures can be used only by ACFTs with RNAV equipment (GNSS, GPS, etc.).
