

Airport Briefing

1. General

Paphos International Airport is a medium sized airport in the Island of Cyprus. Airborne traffic should always have a higher priority than ground traffic. The airport features 5 stands on the Main Apron, 1 helipad and 3 hangars on the South GA Apron and 1 hangar in the North GA Apron.

2. Arrivals

For inbound aircraft, pilots must maintain a maximum speed of 250 knots below FL030, unless otherwise told by ATC. Pilots should expect a maximum speed of 220 knots from the Initial Approach Fix (IAF) until Final Approach.

When Runway 17 is in use, pilots should expect to vacate via C1 or C2. When Runway 35 is in use, pilots should expect to vacate at B2 or C3 as quickly as possible if there's an aircraft on Final Approach.
