Airport Briefing

1. General

Larnaca International Airport is a main airport in the island of Cyprus. Airborne traffic should always have a higher priority than ground traffic. The airport features 7 gates, 4 stands, 2 helipads (in the East Apron) and 4 cargo stands (in the West Apron).

2. Arrivals

For inbound aircraft, pilots shall mantain a maximum speed of 250 knots below FL030 (3000'), unless otherwise told by ATC. Pilots should expect a maximum speed of 220 knots from the Initial Approach Fix (IAF) until Final Approach.

When RWY 24 is in use, pilots should caution traffic from Paphos International Airport. When RWY 06 is in use, pilots should caution traffic from Henstridge Airfield and McConnell AFB.

In case of Communication Failure, pilots should immediatly inform ATC via ACARS (Roblox Chat). If a star was assigned, direct to the last waypoint of your flightplan. If no STAR was assigned, direct to Larnaca's VOR and hold FL025 until further notice.
